M.I.T.

Minimally Invasive Therapy

What is M.I.T.?

M.I.T. aligns with the benchmark in periodontal treatment – being anchored in the EFP S3 Level Clinical Guidelines and built around a patient-first philosophy. This modern approach empowers clinicians to deliver precise, predictable, and evidence-based care for stage I–III periodontitis.

By embracing this structured, research-driven framework, clinicians can elevate their practice, enhance patient outcomes, and align with global standards in periodontal care. This framework empowers clinicians to deliver effective, evidence-based care through three key pillars:

- Thorough Patient Assessment
- Evidence-Based Treatment
- Patient Empowerment

Create a healthier future, with you and M.I.T.

The M.I.T. framework is aligned with: "Treatment of Stage IV Periodontitis: The EFP S3 Level Clinical Practice Guideline." Journal of Clinical Periodontology 49 Suppl 24 (S24) - Herrera, David, Mariano Sanz, Moritz Kebschull, et al. 2022.

Osseo 100 / Osseo 100+

OSSEOINTEGRATION MONITORING DEVICE

Osseo 100 / 100+ measures implant stability to support decision making on when to load an implant.
Especially important when working with shorter treatment time or managing risk patients.
The uncomplicated procedure that measures ISQ allows the implant loading period to be planned in advance.
The reconstruction of crowns and bridges can be monitored to optimise timing to decrease
the risk for failures. Measurements can be made without unnecessary impact since the equipment
does not come into physical contact with the implant or abutment.

VIVA MATE G5

PORTABLE MICROMOTOR WITH LIGHT FOR MOBILE USE

Wherever this mobile micromotor/control unit combination is used, in mobile dentistry or in the dental lab: thanks to its strong batteries it can be used totally independent even without a plug for up to 2 hours. With a rotation spectrum of 3,000 to 30,000 rpm it can be used for all types of dental applications when used with the right handpiece or contra-angle (not included in the set).
